

GEOHELLAS

Technical clays. Natural solutions.

Construction Materials Additives

Enhancing the properties of building materials

Selectively mined and engineered from our reserves of attapulgite and saponite clays, our VEYO® products provide excellent suspension and thixotropic properties for construction materials such as drywall joint compounds, ceiling and wall texture compounds, plasters and mortars, fiber cement formulations, asphalts and cement slurries, sealants and mastics, paints, coatings and adhesives and others.

Our finely ground VEYO® products can function as a thickener, suspension agent or binder in water-based and solvent mixtures. They can be synergistically and cost-effectively used to reduce or replace a variety of cellulosic, gum and associative thickeners.

VEYO® gelling products provide viscosity control, anti-sag and anti-splatter properties to coating systems, and prevent separation of liquids (syneresis). Producing a smooth finish and reducing drying cracks, they also enable easy flow and application, and promote stability.

Commitment to improvement

Our team of experts is committed to improving performance, efficiency and output through every product. This value-adding approach has secured for Geohellas a growing industry reputation.

Dedicated to quality

Geohellas is driven to raise the standards of all our products, services and activities. The company has duly established a quality management system to guarantee consistently excellent quality for all its products, a system that conforms to the ISO 9001/2008 norms as certified by Germanischer Lloyd.

PRODUCT RANGE

VEYO® Powder

An attapulgite powder that forms a stable gel in the presence of salts and other additives allowing it to be used as a binder, suspension agent and thickener in a wide range of building materials applications.

VEYO® Ultra Fine

A finely ground attapulgite powder that forms a stable gel in the presence of salts and other additives allowing it to be used as a binder, suspension agent and thickener in a wide range of building materials applications.

VEYO® Powder-A/S

An attapulgite/saponite powder with high-gelling properties, used as a binder, suspension agent and thickener in a wide range of building materials applications.

VEYO® Ultra Fine-A/S

A finely ground attapulgite/saponite powder with high-gelling properties, used as a binder, suspension agent and thickener in a wide range of building materials applications.
