

Advanced agro-products for higher crop yields

Modern crop production calls for precise delivery of fertilizers, new-generation environmentally-friendly pesticides and additives essential to optimum yield.

In response, Geohellas has designed and developed a suite of advanced agricultural clay carriers that ensure accurate dispersal and absorption for a vast range of specialized crop inputs.

At the same time, Geohellas attapulgite clay's inherent properties function to improve the quality of planting soils and peats and benefit the plant naturally. Our series of clay soil improvers provide enhanced crop performance and increased agricultural production.

Combining accuracy and the ability to customize individual product parameters, Geohellas's technical clays boost the performance and value of our clients' products.

Agricultural carriers: AGLEV® FT

Our low-dust, granular agricultural carriers and powder products are made from attapulgite and saponite clays—which make for a higher-performance alternative to kaolin. They allow us to customize basic carrier parameters for our clients, such as liquid holding capacity, bulk density, dispersion and resistance to attrition, as well as viscosity for special thixotropic agricultural applications.

Soil improvers: AGLEV® SI

Our granular and powder, universal soil improvers are 100% natural made from porous attapulgite clay. They make excellent material for use in seedbeds, soil mixtures and peats, to enhance planting soil performance and improve nutrient retention for all indoor and outdoor plants to keep them healthy and strong.

About Geohellas

The exclusive European source for attapulgite clay and custom attapulgite/saponite blends, Geohellas is an industrial minerals company whose abundant mineral resources are complemented by professional strength in depth. Featuring an expert, dedicated R&D department and leading-edge manufacturing facilities, Geohellas delivers an expanding portfolio of superior technical clay products that enhance product quality and performance for clients in various business sectors.

The Geohellas team is committed to improving the performance, efficiency and output of our customers' products. This value-adding approach has secured for Geohellas a growing industry reputation. Moreover, Geohellas has established an advanced quality management system to guarantee consistently excellent quality for all its products, a system that conforms to the ISO 9001/2008 norms as certified by Germanischer Lloyd.
